# 拔罐、穴壓與練氣的關聯

謝麗貞1,2 1 穴壓與拔罐學會學理事長 2 吉錠診所負責醫師

成功的拔罐倚賴正確有效的穴壓,正確有效的穴壓其基礎在由練氣所得強勁可運用的氣能。

### 一、拔罐

拔罐的安全性主要在於壓力的設定 需在人體組織可負擔的最高限度之內, 這是由機器設備的性能和操作的謹慎度 而定。而拔罐的有效性則須倚靠正確有 效的穴壓,將組織內待排除的有毒廢棄 代謝物給予聚集在穴道關口之處,有利於 於拔罐時一次就拔離病灶地區,有利於 人體加速自動修補的運作,同時立即解 除廢棄氣血囤積在病灶處,緩解壓迫神 經所造成的痛感,和對肌肉骨骼關節因 腫脹所造成的運動限制。

## 二、穴壓

有效的穴壓則在於正確罹病位置的 尋找和確定,也就是病症的診斷;要一 次就有效且最大量廢棄氣血的聚集則在 於穴壓的操作技術,否則拔罐也沒有作 用。病症的診斷要對人體解剖結構、生 理運作、病理成因有充份的了解,穴壓 的特點就是用氣能知識去執行穴道的 尋、病灶位置的確定,和將廢棄物聚集 的操作能力,這是一套完整的學問知識 和技術需要學習熟練之。除此之外, 穴 壓的操作工具就是人體十個氣能出入手 指頭, 人體經過氣能的鍛鍊和駕馭可以 自十個手指經過人體體表的穴道去進行 病症的診斷和治療技術的操作。

# 三、練氣

除傷病,加速恢復健康,身心強健而延 年益壽。

線氣在於提昇人體自動產生能量系統的效率,使自我能量功率的增加,他自己體格逐漸增強,適應更高能階的氣能。所以線氣有其特殊的功法,首先是呼吸吐納方式的改變,然後要增發學習為能力效率,更重要的氣能有效的是要學的氣能者效的氣能去做有益身體健康,強化器官組織的工作,進而服務他人,強行是利己利他的能量提昇的目的和功效。

有別於其他利用自己本身天生的能量去運動,或所謂的去練氣功,這裡所謂的練氣則在於啟動自我產生能量的三焦系統,啟動增強人體潛能的命門,發揮人體額外的氣能偵測和感知能力,所以經過穴道去了解人體,利用氣脈去辨病灶的位置,駕馭氣能去聚集人體內的廢棄物質,達到穴壓治療的功效,方使拔罐將廢棄氣血移除,方便人體有效的修補機制的進行。

# 四、拔罐、穴壓與練氣的關聯

再強調,拔罐只是一種將人體內的 氣血移除出病灶地區的技術,端靠正確 的位置和有效的穴壓。如果不是倚靠穴 壓將人體內受傷損壞的組織氣血尋找聚 集在特定的位置,才去進行拔罐,是 無功效,反而有害人體的健康組織, 是人人可以操作,所以拔罐必須 要以穴壓為前提,它只是一種配合的相 關技術,加速穴壓後人體修補的效果而 已。

練氣是一種簡單的呼吸吐納的功 法,不過心法十分重要,否則岔氣、走

綜結以上,拔罐需建立在穴壓治療 之上,穴壓必須有線氣作基礎,而練氣 是一本萬利的健康方法。

# Correlation among Cupping, Acupressure and Qi

Lisa Li-Chen Hsieh<sup>1,2</sup> Md, PhD

Acupressure and Cupping Association, Chief Researcher <sup>2</sup> Ji Ding Clinic, Responsible Doctor

Successful cupping relies on correct and effective acupressure, and the execution of an effective acupressure relies on the strong energy generated from practicing of Qi.

The safety of cupping is the pressure which must be within the maximum tolerable limit of each part of human body to avoid damage, whereas the effectiveness of cupping depends on right acupoint where the maximum toxic waste metabolites can be collected and can be extracted at one time by cupping. Cupping is but a complimentary technique goes with acupressure which concentrates as much the maximum toxic waste metabolites on lesion sites. Consequently, two key points of a successful cupping are 1. correct acupoint where the largest amount of toxic waste metabolites is accumulated. and 2. right in-cup-pressure is properly set by the performance of a machine. An accurate cupping will remove immediately pain caused by oppression around lesion sites and help to activate body automatic repair to resume health.

To locate a correct cupping point needs skillful acupressure, which, in turn, needs knowledge of human anatomy, physiological function and the characteristics of each acupoint, so that the collection of maximum toxic waste metabolites in a specific acupoint is able to be made. Once those harmful substances are extracted by cupping, pain consequently reduces and organs and tissues initiate their effective repair to restore health.

The effective acupressure relies in the search and determination of the lesion site for collecting the maximum abandonment of blood and gas, whereas cupping gives right in- cup-pressure to extract them at one time, otherwise the cupping has no effect. On the other hands however, the practice of acupressure needs bio-energy of the human body which come from the breathing exercise and Qi generated from it.

Qi not only improves self-automatic energy but also is the only power to manipulate and control acupoint. Both are the fundamentals in practicing acupressure. Yet, how to use Qi in acupressure acquires learning and practicing to form two major skills: acupoint detection and Qi field induction. The former is to measure and sense each acupoint and its reaction to understand the body, while the later to identify the lesion, to gather the waste

materials, and to activate the body repair procession. In this connection, cupping will remove the waste substances from lesion to expedite the effective repair mechanism of the human body.

In conclusion, Cupping is but a technique to remove blood and gas from the lesion area of the body with little treatment effect and should not be used independently and not in healthy people. Right in-cup-pressure and correct acupoint where waste blood is

substantially concentrated extracted are the crucial points of a successful cupping. Acupressure is to find out the lesion site and to collect as much as possible waste substance in a specific area, whereas Qi gives acupressure the execution power and energy.

All in all, cupping is based on acupressure treatment. The acupressure must be supported by Qi, and Qi come from breathing exercise in a correct and healthy method.

# **辣氣的意義**

## 一、練氣是什麼

經過鍛煉、沒有雜質 為人體所利用來提昇人體的生命能量

#### 三、宗氣的來源

# 宗氣源自人體兩套自動生命動力系統

- 一、與外界相通,自周圍環境攝取空氣和水穀飲食的「三焦系統」
- 二、在心肌細胞上產生電位令心臟律動,推動全身氣血循環的「心主別脈」

原氣 - 人出生就有的「氣」

宗氣 -經過呼吸吐納產生的氣

二、氣的種類

# 四、練得的氣是什麼

經過特殊呼吸吐納的方式可練得高於「宗氣」的能量 可以運行於人體內的氣能才是我們這裏所謂練得的「氣」
